DXF In 1991, the DXF format was released, providing file exchange between most CAD programs. Originally used for storing engineering and technical drawings and data, the DXF format has since become the de facto standard for storing engineering drawings, graphic data and many other types of information. File types There are a large number of file types that are used to store AutoCAD data. They are described below. ECF An.ecf file, or 'exchangeable drawing format', is a file format created for exchange of 2D and 3D information and which is widely used by CAD programs. It is a binary file, meaning that all of the information is stored in binary form. DWG A.dwg, or 'drawing format', is a file that holds information regarding the construction of an object. DWG files were introduced as a format for technical drawings. DWG files are 3D, 8-bit binary files. DWF A.dwf, or 'drawing format', is a file that holds information regarding the construction of an object. DWF files were introduced as a format for technical drawings. DWF files are 3D, 16-bit binary files. DWF/XML A.dwf, or 'drawing format', is a file that holds information regarding the construction of an object. DWF files were introduced as a

format for technical drawings. DWF files are 3D, 16-bit binary files, that use the more compact XML format. DWF/XML files can be viewed by any XML-aware application. 3D modeling file The most popular 3D modeling file format is the 3D Modeling Language (3DML), which is also a part of AutoCAD. AutoCAD supports all 3DML binary data import and export. 3DML is a system-independent 3D object modeling language developed by ObTime, Inc. to provide a universal data interchange format for 3D information. Technical drawing The technical drawing format is a binary format that holds information about an object, and is available as AutoCAD DWG or DXF files. AutoCAD DWG files are 3D, 8-bit binary files, and AutoCAD DXF files are 2D, 8-bit binary files. Workflow improvements Create workflows to share and reuse working drawings: Attach to the active drawing (or a saved copy) and instantly open a shared view (drawing, view, or template) on a device, such as a projector or interactive whiteboard. Create copies of the view and send them to others to work on simultaneously. Also, detach a shared view from the drawing to work on it on your own.
