In order to prevent software piracy, Autodesk periodically creates new versions of the software. In some cases Autodesk releases a new version without the activation key. To prevent the use of those keygens, Autodesk encrypts the registration key file with a series of specific parameters that are unknown to the user and make the task of finding a valid key file impossible. The above is why the main purpose of the software keygen is to generate the software registration key and print it out. References Category:Adware1. Field of the Invention The present invention relates to a device for measuring the width of a substrate, and more particularly to a device for determining the width of a substrate such as a glass substrate by radiating a laser beam onto the substrate. 2. Description of Related Art In the manufacturing process of a flat panel display, the width of a substrate such as a glass substrate is measured to determine the positioning of the substrate when the substrate is transferred to the next process or to position the substrate in the next process. The conventional method for measuring the width of the substrate is to manually measure the width of the substrate with a tape measure and to record the width of the substrate. In addition, in the manufacturing process of a flat panel display, a laser process is often used to process the substrate, and the accurate positioning of the substrate requires the distance between two laser beams projected onto the substrate to be measured with an accuracy within 1 micron. However, the accuracy of the measuring method of the width
