CADFUS is a non-profit organization (based in Reno, NV, USA) with the stated goal of improving information on the use of CAD tools in the construction industry. Its main efforts are to design and develop a set of metrics to compare CAD engineering practice with best practice construction industry standards, develop educational resources and share them on the Internet. The organization was formed in 2004 and has since completed several studies that characterize the CAD tools used by the construction industry, survey respondents and surveyed companies. The use of computer-aided design and engineering has been a mainstay of the design and construction industry since the 1970s.

Commonly, large scale projects (10,000+ square feet) are designed and coordinated through multiple disciplines and used in the construction of homes, commercial, and other such large scale buildings. CAD software is utilized by many members of the field of engineering. Traditionally, drafting is one of the first steps in the design process and is an integral part of the engineering process. Drafting and design elements are planned and computed by computer-aided design software. CAD is used in design and management of engineering construction projects including the coordination of architectural design, design intent specification, design management, cost estimation, progress monitoring and scheduling, project control and administrative functions, as well as cost tracking. CAD workflows are created using the design software's graphical interfaces and data exchange or data link-up with external information systems including GIS, simulation, analysis, testing, scheduling, inspection, and approval, costing and bill of materials systems. Design-to-plate (DTP)

software has expanded the application of the CAD tool to construction, producing large amounts of construction-related engineering drawings. The use of CAD tools by the construction industry has increased the ability of the industry to design and build projects that are more energy efficient, cost effective, and easier to operate. CAD tools are also used to create computer animations, engineering diagrams and models, and manufacturing drawings. Command AutoCAD, as all other AutoCAD commands, are accessed using double-clicking the mouse button. File format Autodesk files generally have a.dwg extension (5b5f913d15
