The Dual multi-timbral keyboard player-shredder's finest. The xtalk-7 lets you record, sample, effect, and play back up to 192k at once (using the onboard 64-bit DSP processor). Dual input, dual output, and dual expression. The xtalk-7 also comes with a sophisticated digital effects engine including delay, phaser, chorus, flanger, rotator, tweeter, & weaver. Three FX Loop bins allow you to record up to 192k tracks, and save or load the effect configuration of the xtalk-7. The xtalk-7 is the portable 1RU solution for multitimbral recording and playback, sampling and storing up to 192k of external audio and MIDI data simultaneously, and easily recording, playing, editing and manipulating external audio and MIDI data. The xtalk-7 includes front panel and rear panel knobs for adjusting delay, clock speed, pitch, and other functions; and a stunningly elegant design. Beautiful even in the dark, the xtalk-7 is perfect for recording, backing tracks, and sequencing your ideas. And while the xtalk-7 records and plays back up to 192k data at once, it has a built in 32-bit DSP to do the heavy lifting. The xtalk-7 does all the work, with no need for computer CPU overload. Just hook up external MIDI devices and play. The xtalk-7 supports 96 levels of input gain including gain compensation to your DI box so that your xtalk-7 sounds exactly the way you want it to sound. Virtins Sound Card Oscilloscope is a dual-channel oscilloscope ensuring five different types of views, namely, waveform of Channel A and Channel B, Channel A + Channel B, Channel A – Channel B, and Channel A X Channel B, as well as Lissajous Pattern for Channel A and Channel B. The software utility comes as an integral part of Multi-Instrument Pro, providing you with statistical data ranging from minimum, maximum, and mean value, to root mean square and more. The application tries to differentiate itself from competitors by means of its specific accuracy, being able to sharply time-stamp each frame. As for the available digital filters, you should know that your analyses' results depend on the indicated Low, Band, and High Pass, as well as the Band Stop and Arbitrary filters, with the mention that your choices as far as the class of filters is concerned are FIR, FFT, and IIR. Other than that, you should be aware that various other modes are supported by the program, such as digital persistence display, sync interpolation between samples, Equivalent Time Sampling, and more. It is also worth pointing out that using velocity, acceleration, and displacement sensors allows you to carry out waveform conversion. What's more, not only digital signals can be displayed but also analog ones, simultaneously.
