As it turns out, we use OMNIC for all our FTIR data gathering and analysis. We have tried other FTIR software, but haven't had much success with them. For one, they are usually slow to load and launch, and the numbers of features are limited. Also, the scientific writer for these programs is limited, so there is not much that you can do to get meaningful data out of the instrument. The OMNIC Scientific Writer software is basically a simple and powerful Python software that allows you to load, view, organize, and export your FTIR data in many ways. 1cdb36666d
