A puzzle box is a game mechanic in which players collect puzzle pieces and combine them to solve a puzzle. The solution is often required to enable the player to open a door or access an area from where they can move to the next puzzle box. As puzzle boxes differ in their size and difficulty level, the game mechanic is regularly used as a way of progression within a game. Click here for Steam Workshop scenario info!The long-term objective of this research is to understand the interaction between viral and cellular genes that influence the replication of human immunodeficiency virus type 1 (HIV-1) in vivo. The objective of this study is to understand how Nef modulates G1/S and G2/M phase of the cell cycle. The specific aims of the project are: 1) To

---

determine the mechanism by which Nef regulates the G1/S phase of the cell cycle. 2) To determine how Nef regulates the G2/M phase of the cell cycle. 3) To determine the role of Nef in S phase progression. The following model is proposed: in cells expressing a protein(s) that are negatively regulated by Nef, the G1/S and G2/M cell cycle checkpoints are "off", resulting in an increased rate of cell cycle progression. In contrast, in cells not expressing Nef protein, Nef modulates the G1/S and G2/M cell cycle checkpoints, resulting in an decreased rate of cell cycle progression. Evidence exists to suggest that the Nef protein may modulate the G1/S checkpoint by either directly or indirectly interacting with a cellular cyclin or its associated kinases. Nef may also play a role in S phase progression by affecting the rate of G2/M checkpoint regulation or by modulating G2/M phase kinase activity. This hypothesis will be tested using an in vitro growth arrest assay that will test the effects of Nef on DNA synthesis. G1/S and G2/M arrest will be measured by flow cytometry. Additional studies are proposed to measure protein phosphorylation and other cellular regulatory mechanisms that are altered as a consequence of Nef expression. These studies will provide insight into how Nef regulates the replication of HIV-1. Since Nef is one of the viral determinants that contributes to the pathogenesis of AIDS, these studies will be of importance in understanding the means by which Nef modulates viral and cellular gene expression.
